### SOURCE

The herbs of *Atropa belladonna* L.

### BIOLOGICAL ACTIVITY OR INHIBITORS

Scopoletin, isolated from seed kernels of *Melia azedarach* L., has antifungal effects.[1]

Scopoletin and its glucoside scopolin emerge as potential AChE inhibitors by the virtual screening procedure, they show moderate, but significant, dose-dependent and long-lasting inhibitory activities.[2]

Scopoletin has antidepressant-like effects. [3]

Scopoletin regulates hyperthyroidism and hyperglycemia, it also inhibits hepatic lipid peroxidation and increases the activity of antioxidants, superoxide dismutase and catalase, suggests that it has the potential to inhibit thyroid function and hyperglycemia without hepatotoxicity.[4]

Scopoletin has a potential regulatory effect on inflammatory reactions that are mediated by mast cells.[5]

Scopoletin is a phenolic coumarin and a member of the phytoalexins, it induces apoptosis in human promyelocytic cells, accompanied by activations of nuclear factor  $\kappa$ B and caspase-3.[6]

Scopoletin probably produces hypotension in laboratory animals through its smooth muscle relaxant activity - by which means it presumably dilates blood vessels and by acting as a non-specific spasmolytic agent (like papaverine).[7]

Scopoletin exhibits hypouricemic activities through decreasing uric acid production and as well as a uricosuric mechanism.[8]

Scopoletin is capable of ameliorating clinical symptoms of rat adjuvant-induced arthritis, by reducing numbers of new blood vessels in the synovium and the production of important endogenous angiogenic inducers, it may be a potential agent for angiogenesis-related diseases and could serve as a structural base for screening more potent synthetic analogs.[9]
